## TABLE OF COHTEWTS

PREFACE	v
ACKNOWLEDGEMENT	vii
INTRODUCTION	xvii
<b><u>CHAPTER 1. - INTRODUCTION TO THE SOLIP STATE</u></b>	<b>1</b>
1.1. Changes of State	3
1.2. Energetics of Changes of Stale	5
1.3. Propagation Models and the Close -Packed Solid	8
1.4. The Structure of Solids	12
1.5. Determination of Structure of Compounds	25
1.6. The Defect Solid	30
<b><u>CHAPTER 2. - THE POINT DEFECT</u></b>	<b>39</b>
2.1. Types of Point Defects	39
I. The Point Defect in Homogeneous Solids	41
II. The Point Defect in Heterogeneous Solids	45
2.2. The Plane Net	49
2.3 Defect Equation Symbolism	57
2.4. Some Applications for Detect Chemistry	58
I. Phosphors	50
II. Lithium Niobate	60
III. Bubble Memories	62
IV. Calcium Sulfide Phosphor	64
2.5. Thermodynamics of the Point Defect	65
I. Statistical Mechanics Approach	65
II. Schottky and Frenkel Defects	66
III. Defect Thermodynamics	68
IV. Combined Approach to Defect Formation	70
a. Interstitial Atoms	72
b. Frenkel Pairs	72
c. Schottky Defects	73
V. Defect Equilibria	73
2.6. Defect Equilibria in various Types of Compounds	75
I. Stoichiometric Binary Compounds of $MX_s$	76

II. Defect Concentrations in MXs Compounds	78
III. Non Stoichiometric Binary Compounds	80
IV. Defect Concentrations in $\text{MX}_{s\pm 6}$	82
V. Ionization of Defects	85
2.7. Brouwer's Approximation Method	88
2.8. Analyses of Real Crystals using Brouwer's Method	95
- comparison to The Thermodynamic Method	
I. The AgBr Crystal with a Divalent Impurity, $\text{Cd}^{2+}$	95
II. Defect disorder in AgBr	100
- A Thermodynamic Approach	
2.9. Summary and Conclusions	105
2.10. The Effects of Purity (And Impurities)	107
2.11. Nanotechnology and the Solid State	109

**CHAPTER 3. - THE SOLID STATE – MECHANISM OF NUCLEATION, SOLID STATE DIFFUSION, GROWTH OF PARTICLES AND MEASUREMENT OF SOLID STATE REACTIONS**

<u>SOLID STATE REACTIONS</u>	113
3.1. Solid State Reactions and Nucleation Mechanism	114
I. Types of Solid State Reactions	115
II. Solid State Nucleation Processes and Models	122
III. Diffusion Controlled Solid State Reactions	133
a. The Tarnishing Reaction	133
b. Pick's Laws of Diffusion	136
IV. Role of Defects in Solid State Diffusion Mechanisms	139
V. Analysis of Diffusion Reactions in the Solid State	143
a. Analysis of Diffusion Reactions in Spinel	144
b. Phosphors Based on Spinel	147
c. Diffusion in Silicates and Silicate Phosphors	152
VI. Diffusion Mechanisms Where the Cation Changes Its Valence State	161
3.2. Homogeneous Nucleation Processes - Particle Growth	164
3.3. Nucleation in Precipitation Reactions	168
3.4. Sequences in Particle Growth	169
I. Ostwald Ripening of a Calcium Phosphate Product	171
II. Sintering and Sintering Processes	172

III. Grain Growth	174
3.5. Methods of Measurement of Solid State Reactions	183
I. Differential Thermal Analysis	184
II. Differential Scanning Calorimetry	198
III. Utilization of DTA and DSC	200
a. Applications of DTA	200
b. Uses of DSC	203
IV. Thermogravimetry	205
V. Determination of Rate Processes in Solid State Reactions	211
a. Types of Solid State Reactions	212
b. The Freeman-Carroll Method Applied to DTA	218
c. The Freeman-Carroll Method Applied to TGA	216

**CHAPTER 4. - MEASURING PARTICLE SIZE AND GROWING SINGLE CRYSTALS**

	219
4.1. Measurement of Particle Sizes and Shapes	210
I. Particle Shapes	223
II. Measurement of Particle Shape	228
III. Measurement of Particle Size	232
a. The Binomial Theorem-Particle Distributions	233
b. Measuring Particle Distributions	236
IV. Analysis of Particle Size Distribution Parameters	243
a. The Histogram	243
b. Frequency Plots	244
c. Cumulative Frequency	245
d. Log-Normal Probability Method	246
c. Types of Log Normal Particle Distributions	248
1. Unlimited Particle Distributions	248
2. Limited Particle Distributions	249
3. Log Normal Distributions- Discontinuous Limits	250
4. Multiple Particle Distributions	251
f. Using Particle Distribution Parameters in industry	252
5. Fluorescent Lamp Phosphor Particles	252

6. Tungsten Metal Powder	253
V. A Typical PSD Calculation	254
VI. Methods of Measuring Particle Distributions	357
a. Sedimentation Methods	256
b. Electrical Resistivity - The Coulter Counter	261
c. Laser Diffraction	264
d. Other Methods of Measuring Particle Size	266
4.2 - Growth of Single Crystals	266
I. Heating Elements and Crucibles	269
II. Growth of Single Crystals from the Melt	273
a. Necking in a Seed	274
b. Melt Growth Using the Czochralski Method	276
1. Growing a Single Crystal	278
2. Effects of Rotation in the Czochralski System	281
3. Design of a Crystal Pulling Apparatus	283
4. Heat Flows in the Czochralski System	265
5. An Automated Czochralski System	289
6. Growing Laser Crystals	291
c. Melt Growth Using the Bridgman-Stockbarger Method	208
d. Melt Growth Using the Kyropoulos Method	300
e. Crystal Growth Using a Variation of the Kyropoulos Method	301
f. Edge Defined Crystal Growth from the Melt	305
g. Zone Melting and Refining	307
1. Crystal Purification Using Zone Refining	306
2. The Impurity Leveling Factor	311
h. Crystal Growth from the Melt- The Verneull Method	315
i. Milling and Stoichiometry of the Crystal	313
1. Dystectic Crystals	321
2. Defect -Free Single Crystal Silicon	322
j. Actual Imperfections of Crystals Grown from Melt	324

k. Crystal Growth from a Liquid Phase	327
1. Growth of Single Crystals From a Molten flux	327
2. Hydrothermal Growth of Crystals	330
1. Vapor Methods Used for Single Crystal Growth	340
<b><u>CHAPTER 5. – OPTICAL AND ELECTRONIC PROPERTIES OF SOLIDS</u></b>	345
5.1 The Nature of Light	345
5.2 Absorbance, Reflectivity and Transmittance	351
5.3 Electronic Aspects of Crystals	360
I. Band Models and the Energy Band Model	382
II. Calculation of Energy Bands in Crystals	370
III. Point Defects and the Energy Band Model	382
a. Crystal Structures	362
b. Brillouin Zones	382
e. Energy Bands In Solids	383
5.4. Phonons as Quantized Lattice Vibrations	387
I. Phonon dispersion Equations	339
II. The Case of the Impurity Activator Center in a Phosphor	395
5.5. Electronic Aspects of Phosphors	396
I. Energy Processes in a Phosphor	398
II. Properties Associated with Phosphors	406
a. Notation	407
b. Quantum efficiency	408
c. Decay times	409
d. Band shapes	411
e. Spectroscopic notation	413
III. Organic Phosphors and their Luminescent Mechanisms	416
5.6. Factors Associated with Excitation Energy Conversion	418
I. Prediction of Electronic Transition Intensities	420
a. Multipole Interactions	420
b. Einstein Absorption and Emission Coefficients	421
c. Electronic Transition Moments	423

1. Concise Hamiltonian Calculation of Transition Moments	424
2 Detailed Calculation of Electronic Transition Moments	425
d. Dipole and Multipolar Oscillator Strengths	428
5.7. Mechanisms of Energy Transfer Mechanisms in Solids	431
I. Radiative Transfer (Radiation Trapping)	432
II. Energy Transfer by Resonance Exchange	433
III. Energy Transfer by a Spatial Processes	436
IV. Energy Exchange by Spin Coupling	439
V. Energy Transfer by Non-Resonant Processes	442
5.8. Summary of Phonon Processes as Related to Phosphors	444
I. Excitation of the Activator Center	444
a. Phenon process	444
b. Energy flow	444
II. Excited State Relaxation	444
a. Phonon Process	444
b. Energy flow	444
III. Center Ready to Emit	444
a. Direct relaxation	444
b. Emission of a photon	444
c. Resonant and non-resonant processes	445
d. Actual phonon process	445
 <b><u>CHAPTER 6. – DESIGN OF PHOSPHORES</u></b>	 447
6.1. The Luminescent Center of Inorganic Phosphors	447
6.2. The Ground State Perturbation Factor	542
6.3. Design of Phosphor	456
I. Choice of the Host Components	456
II. Choice of the Activatore(s)	462
III. Quenchers or "Killers" of Luminescence	468
6.4. Factors Affecting Phosphor Efficiencies (Brightness)	471
6.5. Preparation of Phosphors	480
I. Phosphor Parameters	480
a. Independent Variables	480

b. Dependent Variables	486
c. The Firing Cycle as a Dependent Variable	488
d. Size and Mass Fired	492
e. Firing Atmosphere	493
f. Effect of Host Structure	493
g. Effect of Proportion Method	499
h. Ratios of Components and Use of a Flux	500
6.6. Commercial Phosphors	501
I. Cathode-Ray Phosphors	501
a. How Cathod-Ray Phosphors Are Used	502
b. JEDEC Phosphors	506
II. Fluorescent Lamp Phosphors	511
6.7. Measurement of Optical Properties of Phosphors	516
I. Measurement of Phosphor Brightness	517
II. Measurement of Spectral Energy Distributions	513
III. Measurement of Quantum Efficiencies	520
IV. Specification and Measurement of Color	520
a. The Human Eye	521
b. The Nature of Chroma	523
c. The Standard Observer	526
d. Color Measurement	532
e. Color Matching	541
f. Color Spates	543
g. The Munsell Color Tree	544
h. Color Matching and MacAdam Space	548
6.8. Rare Earths and Their Spectral Properties	552
I. History of the Lanthanides	552
II. Chemistry of the Lanthanides	554
III. Rare Earth Energy Levels and Electronic States	559
a. Calculating Rare Earth Energy Levels	565
b. The Concept of Fractional Parentage	588
c. Energy Transitions and Mixed States	573
d. Spectroscopic Rules for the Rare Earths	575
e. Experimental Stark States	577
f. The Fre-Ion Approach to Rare Earth	582

Energy Levels	
g. Charge Transfer States and 5d Multiplets	565
h. Phonon Assisted Relaxation in Phosphors	587
g. Anti-Stokes Phosphors	594
h. The solid State Laser	603
<b><u>CHAPTER 7. – CURRENT PHOSPHOR DEVICE TECHNOLOGY</u></b>	615
7.1. Current Progress in CRT Display and Discharge Lighting	615
I. Cathode-Ray Tubes (CRT)	615
II. Fluorescent Lamps	622
7.2. Current Display Devices Based Upon Electron Generation	628
I. CRT's For Display, Measurement and Specialty Types	630
a. Oscilloscopes & Storage Tubes-Measurement	630
b. Flying Spot Scanner	632
c. Radar Displays	633
d. Image Intensifier Screens	633
II. Thin Film Technology	637
III. Devices Using Internal Electron Beam Generation	
a. Vacuum Fluorescent Displays	645
b. Field Emission Displays (FED)	648
c. Large Outdoor Displays	651
d. Light Emitting Diodes (LED)	652
e. Light Emitting Diode Lasers	659
f. Organic Light Emitting Diode Displays (OLED)	667
g. Electroluminescent Displays (EL)	673
7.3. Current Display Devices Based Upon Photon Generation	676
I. Fluorescent Lamps for Special Purposes	677
a. Liquid Crystal Back-Light Displays	677
b. Lamps for Copying Machines	683
c. Blacklight Lamps for Water Treatment	683
d. Medical Uses for Blacklight Lamps	634
II. Display Devices Based Upon Vacuum UV Photons	684
a. Plasma Display Panels-Vacuum UV	685
b. Neon Signs	690
III. Devices Utilizing High Energy Photons	691

a. X-Ray Intensifying Screens	691
b. Scintillation Phosphors tor Imaging	696
c. Long Decay Phosphors	701
